

# smartphotokiosk

Complete solution  
for self-service  
photograph printing!

**smartphotokiosk** is a complete printing system allowing users to print their own pictures taken with cell phones or digital cameras.

# smartphotokiosk

SmartPhotokiosk allows users to print their own photos. Printing can be performed by paying through the coin acceptance mechanism or the card reader.

The program supports multiple languages, eliminating communication problems when accepting orders in different languages.

**Languages supported:** Turkish, English, French, German, Italian, Russian, Czech, Spanish.

**Operation:** Users select one of the bluetooth, multimedia card reader or CDROM options for data entry. Then the language is selected and picture files on the bluetooth device, multimedia card or CDROM are scanned and the results are listed. Users select and confirm pictures to be printed and print options on this screen. Once the pictures are selected, users progress to the payment stage by pressing the "Done" button. The payment amount is displayed on the screen once the Done button is pressed. Pictures are printed once the payment is done through the coin automat or card reader.

**Print Options:** Users can specify print order characteristic such as pictures to be printed, frame and number of copies.

## Printing Properties:

	Size:	Number of Copies:	Printing Time:*
2UPC-C13	9x13 (2"x5")	466	13 sec
2UPC-C14	10x15 (4"x6")	400	17 sec
2UPC-C15	13x18 (5"x7")	344	18 sec

\*The printing time is given as an average value.

SmartPhotokiosk uses SONY printers and consumables.
